## eziTracker Codebox

The eziTracker Codebox is a simple and effective solution to the rare occasions when a landline phone is not available on site. It's a proven hassle-free solution that enables the eziTracker monitoring service to be used for any site attendance by a registered remote worker.

The Codebox is a small unobtrusive device (about the same length as a mobile phone) and is kept on site. The device generates an encoded eight-digit validation number signifying the precise date and time (the code is updated on a frequent rotation cycle). When the remote worker arrives on site, he/she uses a mobile phone to text the validation number to eziTracker. At the end of the visit, the remote worker repeats the process, texting the updated code.

*"The eziTracker codebox is an ingenious little device that solves the problem of attendance verification when no fixed line phone is available on site. It's unobtrusive, tamper proof and inexpensive, using latest technology to provide a simple elegant solution."*

*Dave Ellis - Panztel Technical Director.*
